# MODIS SW Surface Radiative Fluxes

Computed using 2-stream model (Wang & Pinker, 2009).

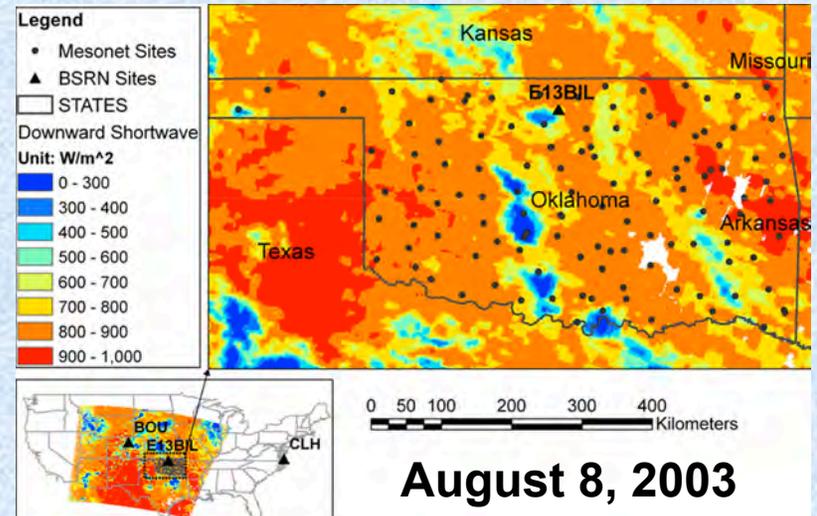

MODIS cloud, aerosol, and surface properties, ozone and water vapor profiles used as inputs.

Computed for the western U.S. for full year 2004 and Jan-July 2005 and 2009.

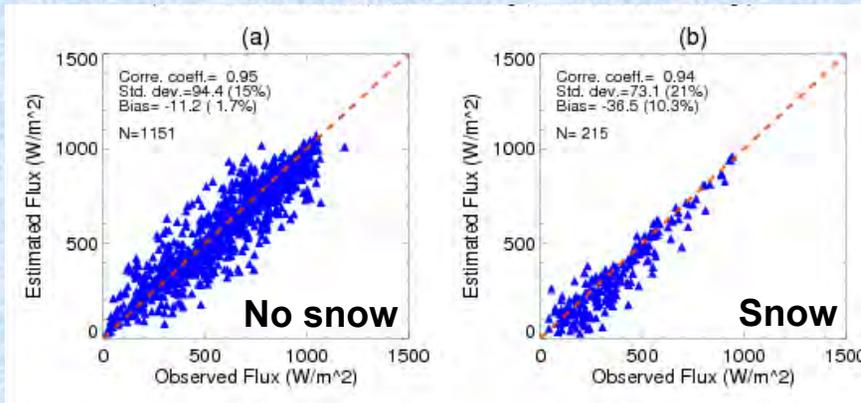

## 1 January 2005 coverage

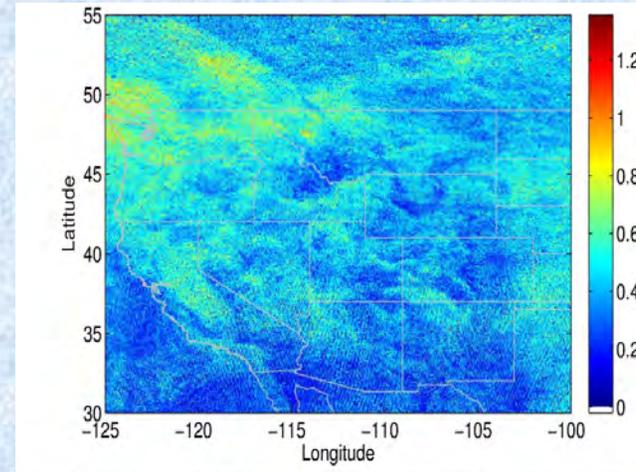

## MODIS spatial field

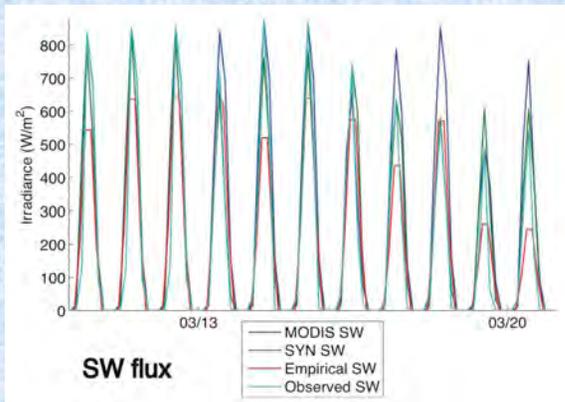

# Application of MODIS Surface Fluxes

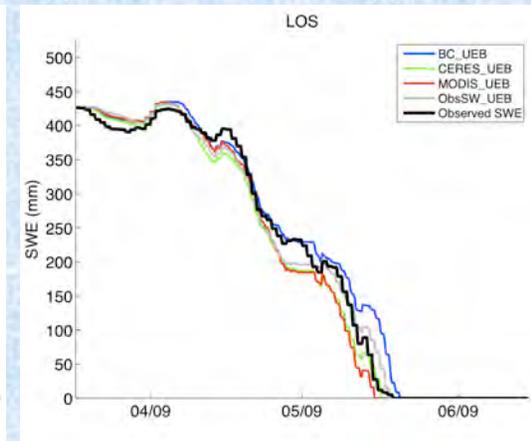

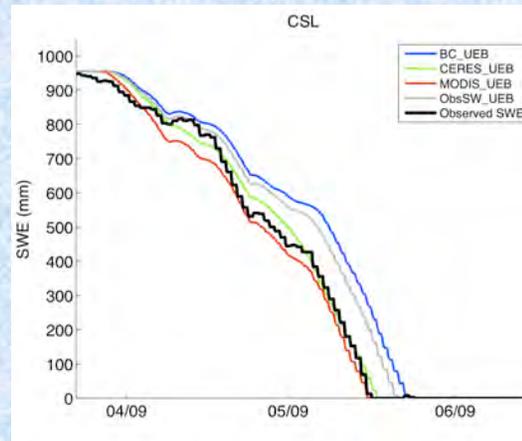

Evaluation focused on snowy conditions

Study of spatial and temporal variability

Interpolation techniques

Performance in snowmelt models
